

AISA - IoT Security Institute Partnership acknowledges a “time to collaborate” approach on IoT security challenges facing the Australian Smart Cities and Critical Infrastructure sectors

Press Release

The Internet of Things Security Institute (IoTSI) and the Australian Information Security Association (AISA) have today announced the signing of a memorandum of understanding (MoU) to cooperate in the fields of cyber security within emerging smart technology eco-systems, cyber educational services, and collaborative advisory engagements within the public and private sectors.

"Under the MoU, the two sides will cooperate in several fields related to cyber security within key Australian IoT and IIoT industry sectors. This collaboration will allow for the bringing together of skills, knowledge and research from both organisations to better advise, and engage cyber security and privacy professionals working within the Australian cyber security industry." stated Alan Mihalic, President IoT Security Institute

"AISA is a recognised authority on information security in Australia with a membership of over 6000 individuals and corporate sponsors across the country. The opportunity to partner with AISA on an array of smart cyber initiatives will certainly be a great step forward in developing and encouraging the conversation on Smart Cyber challenges and opportunities." says Alan Mihalic (left)

"Key to the MOU is the collaborative nature of this strategic partnership. The IoTSI will provide AISA members access to the IoTSI knowledge base, research material, and SCCISP certification programs. In addition, AISA members will have access to discounted SCCISP certification courses and unlimited free access to IoTSI member services. In turn, Australian IoTSI members will have access to many AISA benefits; including chapter events, knowledge exchanges, and discounted access to the Australian Cyber Conference Mihalic added."
